## **DETAILED ACTION**

### ***Election/Restriction***

1. Applicant's election with traverse of Group I (claims 1-31) in Paper No. 7 is acknowledged. However, because claims 27 and 29-30 require "further comprising transfusing/transplanting... a human", they should have been alternatively restricted into the invention of Group II. The restriction requirement of Paper No. 6 is, therefore, vacated and replaced by the following restriction requirement.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-26, 28 & 31, drawn to non-immunogenic compositions, as well as methods of producing such compositions, classified in class 424, subclass 93.7.
  - II. Claims 27, 29-30 & 32-54, drawn to a method of decreasing phagocytosis, rejection of cells or tissue, or decreasing antibody aggregation by introducing a non-immunogenic molecule into a subject, classified in Class 424, subclass 93.1.
3. The inventions are distinct, each from the other because of the following reasons:

Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. § 806.05 for inventive groups that are directed to different methods, restriction is deemed to be proper, because these methods appear to constitute patentably distinct inventions for the following reasons:

Art Unit: 1647

Groups I & II are directed to methods of producing non-immunogenic compositions and toward methods of decreasing phagocytosis, rejection of cells or tissue, or decreasing antibody aggregation within a subject. Each of these methods require physically and functionally distinct elements. For example, the method for producing non-immunogenic cell compositions of Group I does not require subjects to be treated, nor assays for detecting decreased antibody reactions, unlike the method of Group II. These inventions are, therefore, patentably distinct, since one is not required for the other.

Because these inventions are distinct for the reasons given above, they have acquired a separate status in the art as shown by their different classification, and the non-coextensiveness of the search and examination for each group would constitute an undue burden on the examiner to search and consider each of these separable groups with their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
